5. **(Currently Amended)** A battery pack apparatus comprising:
a first unit including:
a first case;
a battery pack disposed in the first case;
a cooling medium feeding device having a feeding passage
disposed between a first side of the battery pack and the first case
and a discharge passage disposed between a second side of the
battery pack and the first case, the feeding passage and the
discharge passage collecting and discharging a cooling medium
through cooling medium passages of the battery pack;
a switch for turning electricity on and off to the battery pack;
a second unit including:
a second case that is separated from the first case; and
a control section disposed in the second case, wherein the
control section controls a charging and a discharging of the battery
pack when the switch is turned on; and
a harness connecting the control section to the battery pack through the
switch wherein the second case is configured to cool the control section by
forcible supply of the cooling medium into the second case.

6. **(Cancelled)**

7. **(Previously Presented)** A battery pack apparatus according to claim 6,
further comprising a duct connecting the exhaust hole with the discharge passage,
wherein the cooling medium forcibly supplies cooling air inside the second case to cool
the control section.
